PERSONAL EMERGENCY PENDANT (PEP)TM

24-Hour Intelligent Protection
For People On The Move

HOW DOES IT WORK?

When the SOS emergency button on the PEP™ locator is activated, an alarm is sent to the TASK Community Care 24-hour monitoring centre, displaying client details and their location. A two-way conversation can then take place. The operator will ascertain the nature of the emergency, enabling them to react quickly to the situation and provide the appropriate response.

GPS, WiFi and beacon positioning all operate to provide not only the user's location but also advanced geo-fencing functionality. Also incorporates energy saving technology for achieving long life of the PIP™ locator.

4G LOCATION TRACKER

WHO CAN BENEFIT?

Today, there are many people who feel vulnerable and this can be for many reasons, whether they are suffering from dementia, elderly or living with a disability, while many others suffer for a variety of reasons, including domestic violence.

Being able to give people and their families a feeling of confidence and safety is what TASK Community Care is all about, giving them confidence to go about their daily lives in the knowledge that if a situation should arise, an activation of the SOS button on the Personal Emergency Pendant (PEP) will result in an effective response and targeted assistance.

Reassurance when no-one else is there to help
