24-Hour Intelligent Protection
For People On The Move

HOW DOES IT WORK?

When the SOS emergency button on the PIP™ locator is activated, an alarm is sent to the TASK Community Care 24-hour monitoring centre, displaying client details and their location. A two-way conversation can then take place. The operator will ascertain the nature of the emergency, enabling them to react quickly to the situation and provide the appropriate response. Optionally tracking is also available via mobile phone app.

Employees that are out of sight, cannot be out of mind

GPS, WiFi and beacon positioning all operate to provide not only the user's location but also advanced geo-fencing functionality. Also incorporates energy saving technology for achieving long life of the PIP™ locator.

WHO CAN BENEFIT?

There are many organisations, public and private, large and small who have staff that work remotely, or in isolation from their base, who face unpredictable circumstances every day. These can range from public health nurses visiting the sick, or a doctor on call, to the driver making his daily deliveries. Accidents happen, and things often don't go as planned. If an unfortunate situation should arise and a worker has no way of calling for help, a minor problem can become serious, or even life threatening.

The PIP™ locators are the ideal solution should an awkward or dangerous situation occur. The devices give an unprecedented level of personal protection and answer the growing concerns about the vulnerability of persons working alone in high risk situations, or who are isolated for long periods.

Reassurance when no-one else is there to help
